

## Investor Information

### **Third 3D production system delivered to Ohnhäuser**

- ◆ **Contract manufacturing capacity for Exentis customers significantly increased to 10 million parts**
- ◆ **Production and development cooperation with Ohnhäuser further extended**
- ◆ **Exentis 3D production system delivered within six weeks**

**Stetten, Switzerland, 22 February 2023** – Exentis Group AG, provider of the only 3D technology platform worldwide that enables industrial large-scale manufacturing, has delivered a third 3D production system to its exclusive contract manufacturer Ohnhäuser. The delivery was made within six weeks after the order.

Exentis 3D production system designed for the manufacturing of millions of industrial parts

Similar to the other two Exentis 3D production systems, the third system will also be used for the manufacturing of industrial applications in the material classes metal, ceramics and polymers. This increases contract manufacturing capacity for Exentis 3D community members, the Exentis customers, to more than 10 million parts per year, only taking into account Ohnhäuser's Wallerstein site in the German state of Baden-Württemberg.

Dr. Gereon Heinemann, CEO of Exentis Group AG: "Together with our long-standing partner Ohnhäuser, we are well prepared with the current capacity expansion for further already foreseeable contract manufacturing projects. Some of our 3D community members regard contract manufacturing as the first step towards using the Exentis 3D technology platform to operate their own Exentis 3D systems for industrial large-scale production under license agreements after a transition phase. This comes with several years of exclusivity on the manufactured parts and materials used."

Hermann Rieger, Managing Director of Ohnhäuser GmbH: "The use of innovative manufacturing technologies has always been a key element of our success. In this way, we are also making a significant contribution to the further technological advancement of our region. Within our development cooperation with Exentis we are directly involved in the development process of industrial parts – regionally and close to our customers."

## **About Exentis**

As a solution provider, Exentis has the only proprietary 3D technology platform worldwide that allows industrial large-scale production. Industrialized Additive Manufacturing is universally applicable. For industrial or cleanroom applications. With free choice of materials, such as metals, ceramics, polymers, pharmaceutical or bio-printing products. Highly flexible 3D production technology combines rework-free component geometries with advantageous cost-benefit ratios. The cold printing process

in use is sustainable and conserves materials as well as resources. Our customers, the Exentis 3D community members, can choose between exclusive in-house manufacturing under license agreements or having Exentis produce millions of applications for them as a contract manufacturer.

## **About Ohnhäuser**

Ohnhäuser is a modern, medium-sized company with over 300 highly skilled employees and a successful company history spanning more than 65 years. Through its expertise, flexibility and highest quality standards, the company has established itself nationally and internationally as a premium supplier of components and assemblies for the aerospace industry (with respective certifications), for mechanical and plant engineering as well as for car manufacturing. Highly innovative technologies, modern machinery and committed employees are the most important success factors. Sustainable management and the foresightful use of resources form essential cornerstones of the corporate philosophy.
