

Press Release

Expansion of successful cooperation with Sintokogio

- ◆ High demand for Exentis 3D technology platform in Japan
- ◆ Extension of collaboration with Sintokogio to include additional material classes
- ◆ Sintokogio considers expanding its contract manufacturing business

Stetten, Switzerland, March 11, 2025 – Exentis Group AG, provider of the world’s only 3D technology platform enabling industrial large-scale manufacturing, and Sintokogio, a leading Japanese technology corporation specializing in metal processing and environmental technology with more than 4,000 employees in 17 countries, are further expanding their successful collaboration.

Gürsel Demircali, Chief Commercial Officer of Exentis Group AG, visits the Exentis showroom of Sintokogio in Japan

Sintokogio has been the exclusive license and distribution partner of Exentis in Japan for more than two years, operating its own showroom for the Exentis 3D technology platform and processing contract manufacturing orders locally. Due to the high demand for Exentis technology in the Japanese market, Sintokogio has decided to expand its offerings beyond ceramic industrial applications to include metal applications as well. This provides Japanese customers with a significantly broader range of materials for the industrialized large-scale production of their industrial components.

Gürsel Demircali, Chief Commercial Officer of Exentis Group AG: “Since the beginning of the partnership with Sintokogio, business in Japan has developed exceptionally well. Our customers especially appreciate the ability to achieve high-volume production while maintaining maximum flexibility in the manufacturing process. Additionally, the cold-printing process used protects materials and the environment. We expect the intensified cooperation with Sintokogio to provide a strong impetus for further growth of Exentis in the Japanese market.”

Sintokogio is considering expanding its contract manufacturing business based on the Exentis 3D technology platform. To support this initiative, the two companies are currently discussing the purchase of additional Exentis production systems by Sintokogio.

About Exentis

As a solution provider, Exentis has the only proprietary 3D technology platform worldwide that allows for industrial large-scale production. Industrialized Additive Manufacturing is universally applicable. For industrial or clean room applications. With free choice of materials, such as metals, ceramics, polymers, pharmaceutical or bio-printing products. The highly flexible 3D production technology combines rework-free component geometries with advantageous cost-benefit ratios. The cold printing process in use is sustainable and conserves materials as well as resources. Our customers, the Exentis 3D community members, can choose between exclusive in-house manufacturing under license agreements or having Exentis produce millions of applications for them as a contract manufacturer.
