

Press Release

Most successful first half-year in corporate history

- ◆ **Turnover revenue of CHF 10 million generated**
- ◆ **7 systems already sold in the first half, compared to 5 systems in the entire financial year 2021**
- ◆ **Additional «contracted business» (in CHF million) in the mid single digit range**

Stetten, Switzerland, 30 August 2022 – Exentis Group AG, provider of a proprietary 3D technology platform that enables large-scale industrial manufacturing, released its half-year figures 2022 today.

Following a successful 2021 financial year, Exentis was able to carry over positive momentum into the first half of this year, again presenting solid results. Overall, the first half-year 2022 was the most successful first half in corporate history. In the first half of 2022, 7 development and production systems have already been sold, compared to 5 systems in the entire financial year 2021 and 3 systems in the first half of 2021. The Exentis 3D systems were placed into the US, Germany and Japan.

Compared to the figures published in the 2021 half-year financial statements, turnover revenue increased by 4% to approx. CHF 10 million.¹ The successful business development is also reflected earnings-wise by achieving an operating result (EBITDA) of CHF 1.2 million. The related EBITDA margin in the first half-year came in at 12.4%.

¹ When considering the new development and final assembly site in the half-year figures for 2021 in retrospect, turnover revenue for the first half of 2022 was 26% lower than the comparative figure for the first half of 2021.

Because of the current high level of utilization of the Company's final assembly capacities, several 3D production systems on order are gradually being assembled and will only be delivered during the next few quarters. The majority of these 3D production systems, which have already been ordered but not yet delivered, have not yet been considered in the current half-year turnover figures. At the time of the release of the half-year results, this additional "contracted business" is expected to account for future turnover revenue (in CHF million) already in the mid single digit range.

Despite the uncertainties in conjunction with the developments in Ukraine, which cannot be predicted at this time, and the looming energy crisis in Europe, Exentis is expecting the positive business momentum to continue in the second half of 2022. This positive outlook is being reinforced by the fact that the Exentis 3D technology platform is being used by 3D community members in a wide variety of different sectors.

About Exentis

As a solution provider, Exentis has a proprietary 3D technology platform that – contrary to conventional additive manufacturing technologies – allows industrial large-scale production. Industrialized Additive Manufacturing is universally applicable. For industrial or cleanroom applications. With free choice of materials, such as metals, ceramics, polymers, pharmaceutical or bio-printing products. The 3D cold printing process in use is sustainable and conserves materials as well as resources. Highly flexible 3D production technology combines rework-free component geometries with advantageous cost-benefit ratios. This allows customers, the Exentis 3D Community members, to choose between in-house manufacturing under license agreements after having purchased Exentis 3D development and production systems, or having Exentis produce millions of parts for them as a contract manufacturer.
